Remote | Available US / UK / AU business hours

SUMMARY

Remote Project Manager with 3+ years delivering web, software, e-commerce, and government systems end to end for international clients. Specialized in taking over unclear or delayed projects and owning execution from kickoff through sign-off. Builds the operating system around the work: documented pipelines, SOPs, automations, and reporting that hold up without a PM in the middle. Calm under pressure, obsessive on follow-through, relentless on documentation.

EXPERIENCE

Norse Foundry LLC | Project Manager, Freelance

Jun 2026 - Present | Remote (US-based e-commerce manufacturer and retailer)

- Owns four work streams for the business: custom order delivery, inbound logistics, product data integrity, and reorder and inventory planning.
- Took custom order delivery off the CEO's desk and cut time from order to production from 1 to 2 months down to 1 to 3 weeks, by building the company's custom order pipeline from scratch in ClickUp: an 11-status workflow with a written SOP covering inquiry, quoting, factory production, QC, and delivery, replacing an untracked email and chat process.
- Manages up to six concurrent custom manufacturing programs for B2B clients, including a 65-unit gemstone dice set order and a 250-unit hexagonal snap tray order, coordinating the China factory, supplier relations, design, and fulfillment.
- Replaced a manual, error-prone Google Docs labeling process with the Norse Foundry Barcode Generator, a single-file web app he built and hosts on GitHub that produces print-ready UPC-A product and case/carton labels plus multi-label sheet PDFs in 1 to 2 minutes, letting any team member self-serve instead of queueing on one person.
- Owns product data integrity across the central product masterfile and four production charts. Audited 1,361 products against the master barcode list ahead of a production chart migration, surfacing 450 SKU issues (around 380 on live products), classifying each by severity, and assigning a remediation path, preventing duplicate and misaligned barcodes from being rebuilt into the new charts.
- Serves as the founder's right hand on an external manufacturing account, driving quoting, sample and mold lock-in, and production coordination with the client team and overseas factory across Slack and WeChat.
- Prepares the monthly reorder and inventory analysis against per-material stock thresholds spanning metal, gem, glass, wood, bone, and coin lines, for review with the founder and Director of Retail Operations, and completed a full catalog inventory gap analysis classifying restock priority as critical, urgent, or low.

Ozarke | Project Manager, Contract

Sep 2024 - Sep 2026 | Houston, TX (Remote)

- Rebuilt the entire project operating system in ClickUp, migrating from a status-only Kanban board to a documented pull system with dependency mapping, automations, and SOPs, eliminating the PM-as-human-router bottleneck and giving leadership real-time visibility into launch status, blockers, and priorities.
- Maintained full launch output with a leaner team of 3, down from 7, by streamlining workflows and cross-training listing staff to handle basic design tasks.
- Delivered 5-10 full product launches per month while managing 30-40 simultaneous pipelines, each running an 8-phase, 40+ task workflow across listing, 3D design, graphics, sourcing, and marketing teams.
- Built daily team and weekly CEO/COO reporting that gave leadership real-time visibility and significantly reduced micromanagement and ad-hoc follow-ups.
- Designed a scalable ClickUp onboarding and QA system using automations and standardized templates, enabling faster new-hire ramp-up without increasing PM workload.
- Project managed product listings across Shopify as the primary channel plus the Wayfair, Walmart, Kohl's, and Amazon marketplaces, coordinating listing content, imagery, and attribute compliance against each platform's standards.

Pareto AI | Project Management Consultant, Contract

May 2025 - Jun 2026 | Los Angeles, CA (Remote)

- Coordinated AI training projects, onboarding subject-matter experts (generalists, legal, and finance specialists) and managing communications, payouts, and concerns across a distributed workforce.
- Managed high-volume task pipelines, including time-sensitive batches of 100+ tasks on weekly deadlines, often running in parallel within a single project.
- Cleaned and formatted training-data outputs to client specifications, and created and maintained the operational guidelines and documentation the expert team worked from.
- Served as escalation point between experts and internal teams (engineering, technical PMs, automation) while delivering daily progress updates to management.

MyBusyBee, Inc. | IT Project Manager, promoted to Lead PM
Apr 2024 - Nov 2024 | Quezon City, PH

- Took over ACPC PIMMS (a government Procurement, Inventory, and Motorpool Management System) as support PM in month 3, after the project had fallen behind and two prior PMs had resigned. Delivered on time with a one-month buffer and full UAT sign-off; promoted to Lead PM after the recovery.
- Rebuilt team and client cadence through daily standups, 2-week Scrum sprints, and rotating 1-on-1s that surfaced blockers invisible in group standups. Managed a team of 6 developers, 2 of whom also handled QA.
- Closed the documentation gap left by verbal-only client agreements, establishing a clear scope-change process that prevented further timeline erosion without damaging the client relationship.
- Also delivered BCDA PAMS (Bases Conversion and Development Authority Procurement and Asset Management System) with zero scope creep and zero liquidated damages.

CoreBridge Solutions | Digital Project Manager, Part-time
Jul 2024 - Nov 2024 | Miami, FL (Remote)

- Led full-cycle delivery of 3 major website projects, coordinating design, development, QA, UAT, and deployment across UX, dev, DevOps, and QA teams.
- Improved project turnaround by introducing Agile and Kanban workflows in ClickUp and Jira, delivering all three sites to client sign-off with full Figma design compliance.
- Managed technical integrations including AWS (S3 and EC2) and Cloudflare, and implemented automated email workflows and backend lead-capture improvements.

Four13 Group | Software Development Project Manager, Contract
Apr 2023 - Feb 2024 | Minneapolis, MN (Remote)

- Led 7 international software delivery projects across Shopify and BigCommerce for clients including Saddleback Leather, EcoEnclose, and KoiCBD.
- Managed a remote team of 8 developers and QA specialists using Agile and ClickUp; drove 30%+ LCP and 70%+ CLS improvements across client platforms.
- Promoted from QA / Developer Trainee to Software Development PM after establishing SME-level expertise in Core Web Vitals and reducing software bugs by 25%.

Earlier

Swab it! Medical Services | Founder / General Manager | 2021 - 2022. Built and ran a COVID testing services business to 350% ROI.

Universal Robina Corporation | Production Supervisor | 2018 - 2021. Led a manufacturing production team of 21 on the plant floor, earned the company "Best Line" award, and delivered a 5% OEE gain. Hands-on grounding in production lines, throughput, and quality control that carries directly into sourcing and factory coordination work today.

SKILLS AND TOOLS

Methodologies: Agile, Scrum, Kanban, Waterfall, Hybrid

Project Management and Platforms: ClickUp, Jira, Shopify, BigCommerce, Notion, Slack, Loom, Figma

Automation and Technical: Zapier, Make.com, Google Apps Script, JavaScript, HTML, CSS, PHP, GitHub

Data and Workspace: Advanced Google Sheets, Google Workspace, Microsoft 365 (Outlook, Excel, OneDrive), WeChat

Languages: English (professional working proficiency)

AI Tools: Claude, ChatGPT

Core Competencies: Project recovery and turnaround, SOP and process documentation, workflow design and automation, stakeholder and client communication, cross-functional team leadership, vendor and supplier coordination, scope and change management, UAT and QA coordination, remote team management, reporting and executive updates

EDUCATION

BS Mechanical Engineering | Central Colleges of the Philippines | 2012 - 2017
Dean's Lister, HR Scholar. Passed the PRC Mechanical Engineer board examination, 2017.
